

# Scenarios CRUK /Findashop Search Function

## Positive journey

GIVEN the user searches for a valid location  
WHEN selecting the search button THEN the  
location is returned with the expected contact  
locations

Currently can't see any locations being  
returned on the CRUK website (might be  
expected behaviour for now so will check what  
I can for the page)

## Negative journey

GIVEN the user enters invalid location via the  
search option WHEN selecting the search  
button THEN no location search results are  
returned

## Considerations

### Cross Browser

Firefox

Google Chrome

Parallel running

Reporting

Running local instances of docker hub and  
nodes
